Cyble Threat Intel DSM for QRadar is to be used with Cyble Threat Intel Workflow available at https://github.com/IBM/IBM-QRadar-Universal-Cloud-REST-API/tree/master/Community%20Developed/Cyble%20Threat%20Intel.

The workflow helps in fetching data from Cyble Vision and the DSM helps in proper parsing of the data. Since it's a DSM, it doesn't really require any testing.
